BULKOWSKI’S TRADING QUIZ

Here’s the latest quiz. What chart patterns can you find? A hint appears below and answers on the next page.

St. Paul Travelers Companies Inc (Insurance (Prop/Casualty), NYSE, STA)

**Hint.** Look for the following chart patterns (If you find others, great!): 2 inverted roofs, scallop, busted triple top, triangle, 2 broadening formations.
The inverted roof pattern is a new one, a pattern I haven’t taken the time to document. You can view its brother, the roof pattern, on my website.

If you own the stock, how do you know it’s time to sell? The answer is on the next page.
1. Price gapped up in a vertical run leading to the chart pattern. A quick decline often follows a quick rise. In this case the decline wasn’t a rapid one, but it did return price to the launch point.
2. The downward breakout was a sell signal.
3. A trendline pierce was also a sell signal. The actual pierce is near 2 in the picture.

The end!
